# App Flow Document

## Overview

This document lists every screen in MediFlow, which role uses it, and how the main journeys move between them. A role switcher in the top bar (demo mode) lets one person play every role in a demo.

## Screen map

**One approved note hands the patient on to every other screen**

Doctor approves the note; the nurse approves the care plan; approved actions land in the schedule, claims queue and patient chat.

Screen map · 6 roles, 15 screens

## Screens

| Screen | Role | What it shows | Main actions |
|---|---|---|---|
| Consultations | Doctor | Today's 10 transcripts and their note status | Open, Generate note |
| Note review | Doctor | Transcript left, editable 13-field note right, flags in amber, guideline check panel | Edit, Check guideline, Regenerate, Approve |

| Screen | Role | What it shows | Main actions |
|---|---|---|---|
| Alerts | Nurse | Red emergency alerts from patient messages | Acknowledge, Open chat |
| Care plans | Nurse | Plans awaiting approval; each with flags, proposed actions and the agent trace | Approve, Edit, Reject, Approve all |
| Outbox | Nurse | After-visit messages not sent through a care plan (coordinator off) | Edit, Approve and send, Reject |
| Nurse inbox | Nurse | Clinical and unclear patient messages | Reply |
| Schedule | Front desk | Upcoming appointments with risk band, reason, reminder and confirmation status | Mark Attended / Missed |
| Claims queue | Billing | Claims sorted red, amber, green | Open |
| Claim detail | Billing | Claim lines, flags with reasons and suggested fixes, note alongside, NHIS result | Edit, Apply fix, Override with reason, Submit |
| Patient chat | Patient | WhatsApp-style chat in a phone frame; patient picker | Type reply, quick-reply chips |
| Ask guidelines | All staff | Chat over the 3 clinic documents with citations | Ask, Open source |
| Knowledge base | Admin | The 3 documents, chunk counts, last ingest | Re-ingest |
| Results | Admin | KPIs from every eval script, latest run, model and prompt versions | Run evals |
| Demo controls | Admin | Data reset and time controls | Reset demo, Run daily job for date, Coordinator on/off |

# Key user journeys

### J1. Doctor documents a visit

1. Consultations → open Ama's transcript → Generate note.

2. Note review: read the draft beside the transcript; fix any amber field.
3. Click Check guideline; read the per-drug result.
4. Approve. The note is final and the coordinator starts.

**J2. Nurse approves the care plan**

1. Care plans → Ama's plan (flags at the top).
2. Open the trace to see why each action was proposed.
3. Approve all (or edit or reject single actions).
4. Follow-up appears in Schedule; the message appears in Patient chat; the claim appears in Claims queue.

**J3. Patient replies to a reminder**

1. Demo controls → Run daily job for 3 days before Ama's follow-up.
2. Patient chat: Ama receives the reminder and replies "2".
3. She is offered 3 slots and picks B; the Schedule updates.
4. She asks "can I stop the tablets?" → hand-off message; it appears in Nurse inbox; the nurse replies.

**J4. Emergency message**

1. Patient chat: a patient types "chest pain".
2. The emergency reply appears at once; a red alert appears in Alerts.

**J5. Billing officer submits a claim**

1. Claims queue → open a red or amber claim.
2. Apply the suggested fix or override with a reason; checks re-run.
3. Submit → the simulated NHIS returns paid or rejected with reasons.

**J6. Reviewer checks the results**

1. Results → run evals (or read the latest run).
2. See every module's KPIs against targets, plus rejection rate before vs after.
