Design Brief

Overview

MediFlow should look like a calm, trustworthy clinical tool: clear, dense enough for busy staff, and never decorative. Every screen uses the same colours, type and components below, so agents building different screens in parallel produce one consistent product.

Brand identity

- **Name:** MediFlow AI. Wordmark in Inter Semibold; a simple teal cross-and-wave mark.
- **Personality:** calm, precise, transparent. The AI always shows its sources and reasons.
- **Voice in the UI:** short, plain labels ("Approve", "Needs attention"), never hype. AI-generated content is always labelled "AI draft".
- **Demo label:** a thin banner on every screen: "Prototype with synthetic data. Not for clinical use."

Colour palette

Role	Hex	Use
Primary (teal)	`#0F766E`	Primary buttons, active nav, links
Primary light	`#CCFBF1`	Selected rows, AI draft highlight
Ink	`#0F172A`	Main text
Muted text	`#64748B`	Secondary text, timestamps
Border	`#E2E8F0`	Card and table borders
Background	`#F8FAFC`	Page background
Surface	`#FFFFFF`	Cards, panels
Success (green)	`#15803D`	Approved, paid, Low risk, matches guideline
Warning (amber)	`#B45309` on `#FEF3C7`	Flags, Medium risk, amber claims, needs attention
Critical (red)	`#B91C1C` on `#FEE2E2`	Emergencies, High risk, red claims, rejected
Chat outgoing	`#DCF8C6`	Clinic messages in patient chat

Role	Hex	Use
Chat incoming	`#FFFFFF`	Patient messages

Rule: red, amber and green carry meaning only (risk, status, flags). They are never used for decoration. Status is always shown with a word or icon too, never colour alone.

Typography

Style	Font	Size / weight
Page title (H1)	Inter	24 px / Semibold
Section title (H2)	Inter	18 px / Semibold
Card title (H3)	Inter	15 px / Semibold
Body	Inter	14 px / Regular
Small / labels	Inter	12 px / Medium
Data and codes (ICD-10, IDs, chunk IDs)	JetBrains Mono	13 px / Regular

Layout

- **Staff screens:** left sidebar navigation (filtered by role), top bar with role switcher and demo banner, content area max 1280 px.
- **Side-by-side review screens** (Note review, Claim detail, Care plan): source on the left (transcript or note), editable result on the right, flags pinned at the top of the right panel.
- **Patient chat:** a phone frame (390 × 780) on the left, the staff console on the right, so both ends are visible in a demo.
- **Spacing:** 4 px base grid; cards 16 px padding, 12 px radius; tables 44 px rows.
- **Responsive:** staff screens work from 1024 px wide; the patient chat works on phone widths.

UI components

Component	Look	Where
Primary button	Teal fill, white text, 8 px radius	Approve, Submit, Send

Component	Look	Where
Secondary button	White, teal border and text	Regenerate, Check guideline
Danger button	White, red border and text	Reject
Status badge	Pill, tinted background + word	Risk band, claim status, plan status
Flag banner	Amber or red bar with icon, reason and fix	Top of review panels
AI draft field	Light teal background until a human edits or approves it	Note form, messages
Citation chip	Mono text `[TG-malaria-03]`, opens the source text	Guideline answers, flags
Trace timeline	Vertical list: step number, reasoning line, tool, result, time	Care plan detail
Chat bubble	WhatsApp-style, timestamp and ticks	Patient chat
Data table	Sticky header, sortable, row click opens detail	Queues and lists
Empty state	One sentence and the next action	Every list

Key screen layouts

Screen	Left	Right
Note review	Transcript (masked words underlined)	13-field form, flags on top, guideline check panel under the medicines
Care plan	Patient summary + plan actions with Approve / Edit / Reject	Trace timeline
Claim detail	Approved note	Claim lines, flags with suggested fixes, NHIS result
Patient chat	Phone frame	Outbox, Nurse inbox, Alerts tabs
